### Summary

see abstract

### Description

The layer PARKREG contains the geometry of 16 subareas of the national park defined in Kurth, Weidmann and Thommen (1960) (pp. 230/262) In the 1960's the Swiss Federal Institute for Forest, Snow and Landscape Research (Birmensdorf, Switzerland. Formerly: Eidg. Anstalt für das forstliche Versuchswesen) initiated a research programme to investigate different sampling methods and to study the forest situation in the Swiss National Park. Maps on the different forest categories, timber capacity (Holzvorrat), occurrence of wildlife damage etc. resulted. Although dating from 1967, the data set from Kurth et al. is important for the research activities in the Swiss National Park. Due to the altitude and the climatic conditions, vegetation dynamics are very slow in this area. Hence, these data can be used for the comparison with newer data or in vegetation modelling in general.

### Credits

There are no credits for this item.

### Use limitations

The data set mentioned above belongs to the Scientific Commission of the Swiss NationalparkWNP. For scientific purposes concerning the Swiss National Parc these data can be obtained via the GIS-SNP-WEBMASTER. An individual contract between the data user on one side and the WNP and the Swiss National Park GIS on the other side settles the intended use, the duration of use, the copyright for publication etc. of the delivered data.

### Extent

There is no extent for this item.

### Scale Range

There is no scale range for this item.
